

Super Farad Capacitor Electromagnetic

Overview

These electrochemical type capacitors are small in size and can offer capacitance in tens, hundreds, or even thousands of Farad. Supercapacitors are used in applications requiring many rapid charge/discharge cycles, rather than long-term compact energy storage: in automobiles, buses, trains, cranes, and elevators they are used for regenerative braking, short-term energy storage, or burst-mode power delivery. Supercapacitors are breakthrough energy storage and delivery devices that offer millions of times more. Super capacitors act like any other kind of capacitor, only they can store tremendous amounts of energy. As an example, the linear power supply of my VHF radio has four 2000 microfarad capacitors. However, unlike batteries, they are capable of much faster charge and discharge rates. Super capacitors store energy not chemically, as do batteries; rather, they store the.
