

Tehran school energy storage

Overview

At ESL, we are dedicated to advancing the frontiers of energy storage technology through innovative research and development in lithium-ion batteries, silicon anodes, solid-state electrolytes, supercapacitors, and nanostructured materials. A major initiative currently underway in Iran's capital is the plan to equip approximately 1,200 schools across the province with rooftop solar power systems. This ambitious project, slated for completion by March 2026, is a collaboration between the Tehran Education Department and the Governor's. Tehran has opened its first solar school, marking a major step toward renewable energy in education. The solar school receives strong support from the municipality, encouraging other schools to adopt similar initiatives. This initiative marks a significant milestone in promoting climate-conscious infrastructure and environmental education at the.
