

The highest solar energy generation rate

Overview

The world currently has a cumulative solar energy capacity of 850. According to the 2022 edition of the annual report published by SolarPower Europe, “global solar capacity doubled in 3. The worldwide growth of photovoltaics is extremely dynamic and varies strongly by country. The top installers of 2024 included China, the United States, and India. The following table lists these data for. Ember (2026); Energy Institute - Statistical Review of World Energy (2025) - with major processing by Our World in Data This dataset contains yearly electricity generation, capacity, emissions, imports and demand data for European countries. You can find more about Ember's methodology in this. In our latest Short-Term Energy Outlook (STEO), we expect U. electricity generation will grow by 1.

The highest solar energy generation rate

[Solar Energy Statistics By Country, Costs And Economics](#)

As of 2023, most commercial panels have efficiencies between 17% and 20%, but researchers have developed PV cells that are nearly 50% efficient. Solar technology is becoming ...

[Solar power generation, 2025](#)

This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find more about Ember's methodology in this ...

[Solar power generation drives electricity generation growth over the](#)

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

[Solar Power by Country 2026](#)

Data and analysis including a list of solar power in every country in the world, countries with the most solar power, and countries that generate the highest percentage of their electricity from solar power.

Solar power by country

Solar power in Morocco is enabled by the country having one of the highest rates of solar insolation among other countries-- about 3,000 hours per year of sunshine but up to 3,600 hours in the desert.

[Ranked: The 15 Countries With the Most Solar Power ...](#)

See which countries have installed the most solar power, and which ones have the fastest annual growth rates over the last decade.

Country Rankings

This dashboard ranks countries/areas to their renewable energy power capacity or electricity generation. The data can be further refined based on region, technology or year of interest.

[Chart: Which 10 countries generated the most solar... , Canary Media](#)

China was the top solar power producer last year, but it's not the only nation that saw a big leap in solar production. Solar energy continued to surge and break records across the globe in ...

[35 Latest Solar Power Statistics, Charts & Data \[2026\]](#)

4.4% of our global energy comes from solar power. China generates more solar energy than any other country, with a current capacity of 308.5 GW. The US relies on solar for 3.9% of its ...

The Final Word
Data Sources
Solar power is becoming an increasingly popular option for home and business owners due to its many benefits. With solar panels, you can reduce your energy costs, help the environment, and even make money by selling excess power back to the grid. In this article, we've listed some interesting solar power statistics that will give you a better idea See more on the roundup

Country Rankings - IRENA

This dashboard ranks countries/areas to their renewable energy power capacity or electricity generation. The data can be further refined based on region, technology or year of interest.

[Global solar generation up 31% year-on-year](#)

In the first nine months of the year, the world's solar output increased by 498TWh over the same period of 2024, a 31% increase, while wind generation grew by 137TWh between these ...

Solar power by country

Overview
Africa
Global use figures
Asia
Europe
North America
Oceania
South America

Many African countries receive on average a very high number of days per year of bright sunlight, especially the dry areas, which include the arid deserts (such as the Sahara) and the semi-desert steppes (such as the Sahel). This gives solar power the potential to bring energy to virtually any location in Africa without the need for expensive large-scale grid-level infrastructural developments. The distribution of solar resources across Africa is fairly uniform, with more than 85% of the continent's lan...
