

The wires of the photovoltaic panels are too long

Overview

If the solar power cable is too long, 1. considering alternative routing options may be beneficial. When electricity flows through a wire, some of it gets lost along the way, impacting the efficiency of your solar system. This loss is influenced by the length and thickness of the wire, as well as the amount of current flowing through it. If you want in-depth voltage-drop figures at various currents and distances, be sure to check out our “cheat sheets”. Higher voltages will be easier to go longer distances with.
