

# What is a square array panel on a photovoltaic panel

## Overview

---

These are based on photovoltaic (PV) solar cells, each measuring about six inches square and generally arranged in groupings of either 60 or 72, depending on the wattage of the panel. An array of anything is an ordered arrangement of objects. Solar panels happen to be objects, and therefore, solar arrays are groups of solar panels. " Because it takes a number of solar panels to produce enough power for a home, if. The solar array is the most important part of a solar panel system - it holds all the panels in your system, collects sunlight, and converts it into electricity. Worry not, you're in the right place.

Solar panels, in turn, are a collection of photovoltaic (PV) solar cells, covered with protective glass and held together with a metal frame. Solar cells are made of semiconductor material, typically silicon, that is sliced incredibly thin. Individual solar cells generate See more on solarreviews FSEC Energy Research Center
