

Which lithium battery stores energy

Overview

A lithium-ion battery or Li-ion battery is a type of rechargeable battery that uses the reversible intercalation of Li⁺ ions into electronically conducting solids to store energy. Their efficiency, fast charging, and long-lasting performance have made them the leading choice for reliable energy storage. They are valued for their high energy density, light weight, and long lifespan compared to older battery technologies like. Lithium-ion batteries are everywhere—from smartphones and laptops to electric vehicles and energy storage systems.
