

# Who should I look for if the snow on a photovoltaic panel melts and hits someone

## Overview

---

The short answer: sometimes yes depending on your climate, roof design, panel tilt, and local snow behavior. For many people, strategic, safe removal combined with design choices and energy storage will maximize output without undue risk. Understanding how to effectively remove or melt snow from solar panels is crucial for maintaining optimal performance during the colder months. Are you using the safest methods to protect your. According to the National Renewable Energy Laboratory, snow-covered panels can experience up to a 100% loss in power output until the snow melts or is removed. Do you need to be worried about the health of the solar panels?

Will you see an increase in your electric bill?

Not to. Your photovoltaic (PV) panels capture that sunlight, and your solar power system converts it to electricity, reducing your carbon footprint and saving you money on your electric bill simultaneously.
