

# Wood for wind turbine blades

## Overview

---

Wind is a low-carbon energy source integral to global climate policies and decarbonization efforts. Construction of wind generating turbines requires many material inputs: balsa wood—a frequently used input in the core of wind turbine blades—is an important example. Senvion, an equipment. The application of wood in the most critical, demanding, and strained component of wind turbines demonstrates the capability of renewable materials and should inspire other industries to challenge the status quo and consider the adoption of sustainable alternatives. German wind turbine blade maker Voodin Blade Technology (Voodin) has announced the first-ever real installation of its wood-based blades on a wind turbine in Breuna, Germany. These large-scale laminated veneer lumber (LVL) blades present an eco-friendly.

## Wood for wind turbine blades

---

### Voodin Blade Technologies

Made from Wood. The application of wood in the most critical, demanding, and strained component of wind turbines demonstrates the capability of renewable materials and should inspire other industries ...

### ['World's first' wooden wind turbine blades installed in Germany](#)

German wind turbine blade maker Voodin Blade Technology (Voodin) has announced the first-ever real installation of its wood-based blades on a wind turbine in Breuna, Germany. These

### [Wooden Wind Turbine Blades: A Game-Changing Solution for ...](#)

Wooden wind turbine blades emerge as part of a broader trend toward more sustainable materials in renewable energy infrastructure. Unlike traditional fiberglass and carbon fiber blades, ...

### [Assessing the Sustainability of Wooden Wind Turbine Blades and ...](#)

While the use of wood in wind turbine towers and blades presents challenges, particularly related to durability and fire resistance, significant advances have been made in ...

[From Balsa Wood to Polymer Foam in Wind Turbine Blades](#)

Typically, a blade's core is constructed with balsa wood or polymer foam. The balsa tree is native to the tropical Americas, ranging from southern Mexico to Peru. Because balsa is scattered in forests ...

[Wooden Wind Turbines: A More Sustainable Alternative to Steel?](#)

Engineers are exploring material options for wind turbine towers and blades. Modvion, a Swedish startup, has just launched the tallest wooden wind turbine in the world, and they are ...

**Clean the Sky**

Designed to be fully biodegradable and sourced from sustainable forestry, the wooden blades generate 78% fewer CO2 emissions during production and cost 28% less than metal ...

### [From Balsa Wood to Polymer Foam in Wind Turbine Blades: Material ...](#)

Wind is a low-carbon energy source integral to global climate policies and decarbonization efforts. Construction of wind generating turbines requires many material inputs: balsa wood--a ...

### [World's First All-Timber Blades Shake Up \\$100B Wind Industry](#)

The world's first all-timber, fully recyclable blade has been designed and installed over a massive wind turbine in Germany, marking a huge shake-up in the US \$100 billion wind-powered ...

#### **Wood you believe it?**

Imagine a modern wind turbine with blades made of wood, spinning gracefully against the serene backdrop of rolling hills and open skies. This vision is now a reality thanks to Voodin ...
